

TOPBUXUS GROW

Topbuxus is a leading Boxwood grower (+10.000.000 plants on 50 ha) that translated its own method of use to Professional Boxwood Care Products available for all Boxwood fans: Nurseries, landscapers and private consumers.

TOPBUXUS GROW is a fast-acting Boxwood-fertilizer and dissolves very quickly. It ensures strong growth and intense deep green leaves.

What's so special?

- Boxwood needs its nutritional boost when the new leaves start growing. This happens 3 times per year: +/- mid-April, mid-June and mid-August. In this phase the Box requires a lot of nutrients that are fast-acting. (in contrast to the widely available Slow Release, long-lasting fertilizers)
- Plant tissue analysis shows that the nicest Box with the bright green foliage contains a high level of Sulphur. Air pollution control efforts have greatly reduced the amount of sulphur. As it is an essential nutrient for Boxwood, TOPBUXUS GROW contains a substantial amount of Sulphur to compensate for the shortage.

How to apply TOPBUXUS GROW ?

TOPBUXUS GROW is a granular fertilizer. Spread on the soil at the base of the plant. Do not spread on the plant.

Quantity: 50 grams per square meter. Divide this by the number of plants on a square meter for the quantity GROW per plant.

When to apply TOPBUXUS GROW ?

JAN FEB MAR **APR** MAI **JUN** JUL **AUG** SEP OCT NOV DEC

- Apply at temperatures above 15°C
- Always wear gloves when handling plant fertilizers

Enjoy your Boxwood again!!!
